

Means "Dad" and Lizzy are part of the set "A":

$$A = \{\text{Dad}, \text{Lizzy}\}$$

Means "E" is an empty set

$$E = \{\} \text{ or } E = \emptyset$$

Means "contains all members of group under consideration"

$$\Omega = \{\text{Everything}\}$$

$$\cup = \{\text{Everything}\}$$

Is a member of

$$\text{Lizzy} \in F$$

Is not a member of

$$\text{TJ} \notin F$$

Subsets

$$X \subseteq Y$$

- means x is a subset of y
- every member of x is also a member of y
- not necessarily reversible
- could be true even if $x = y$

$$X \subset Y$$

- same as above, but false if $x = y$
- called **proper subset**

Defining set extensionally

$$P = \{\text{Dad}, \text{Mom}\}$$

Defining set intensionally

Let P be the set of all parents

- Two sets are equal if they have the same extension, doesn't have to have the same intension

Intensional definition with bracket notation

$$M = \{k : k \text{ is between 1 and 20, and a multiple of 3}\}$$

- Intensionally defining set, M is the set of numbers k such that k is between 1 and 20, and a multiple of 3

Infinite Set

$$I = \{3, 6, 9, 12, \dots\}$$

Cardinality

cardinality: size of set

$$|\emptyset| = 0$$

$$|\{\emptyset\}| = 1$$

Set Operators

Union: OR

$$A = \{\text{Dad, Lizzy}\}$$

$$B = \{\text{Lizzy, TJ, Tommy}\}$$

$$A \cup B = \{\text{Dad, Lizzy, TJ, Tommy}\}$$

Intersection: AND

$$A = \{\text{Dad, Lizzy}\}$$

$$B = \{\text{Lizzy, TJ, Tommy}\}$$

$$A \cap B = \{\text{Lizzy}\}$$

Partial complement

- $A - B$ contains elements in A that are not in B

Total complement

$$\overline{B} = \Omega - B$$

- Means all the things that aren't in B

Cartesian product

$$A = \{\text{Bob, Dave}\}$$

$$B = \{\text{Jenny, Gabbie, Tiff}\}$$

$$A \times B = \{(\text{Bob, Jenny}), (\text{Bob, Gabbie}), (\text{Bob, Tiff}), (\text{Dave, Jenny}), (\text{Dave, Gabbie}), (\text{Dave, Tiff})\}$$

De Morgan Laws

$$\overline{X \cap Y} = \overline{X} \cup \overline{Y}$$

Power Set

- Power set: the set of all subsets of that other set
- every item, every combination, and no items

$$A = \{\text{Dad, Lizzy}\}$$

$$\mathbb{P}(A) = \{\{\text{Dad, Lizzy}\}, \{\text{Dad}\}, \{\text{Lizzy}\}, \emptyset\}$$

Partition

- A group of subsets that contain everything in the original set collectively, and share no duplicates between subsets
